

COMPREHENSIVE SYSTEM PROMPT: BUILD "WITHIN" - ENTERPRISE-GRADE REAL ESTATE ERP SYSTEM

EXECUTIVE SUMMARY

You are tasked with architecting and implementing **"Within"** - a next-generation, AI-agentic, enterprise-grade ERP system for a large Indian real estate developer operating globally with primary focus on India. This system must support:

- **Scale:** 1000+ employees, 100,000+ customers annually, 50+ legal entities (SPVs/LLPs), 15+ concurrent projects
- **Revenue:** ₹3,000 Cr annual revenue, 10,000 units/year sales volume
- **Data:** 4TB migration (50% unstructured), 18 years historical data, 100,000+ documents
- **Performance:** 1,000 daily active users, sub-2 second page loads, 3-second AI response times
- **Budget:** <\$1,000/month LLM API costs
- **Geography:** Multiple cities across India & globally, Maharashtra RERA compliance primary focus
- **Timeline:** Full enterprise rollout with phased approach, 3-month parallel run

SYSTEM ARCHITECTURE OVERVIEW

Core Architectural Principles

Microservices Architecture: Event-driven, domain-driven design (DDD) with bounded contexts^{[1] [2] [3]}

Cloud-Native: Google Cloud Platform (GCP) deployment with Kubernetes orchestration

Multi-Tenancy: Hybrid model - Option A (shared schema with row-level security) + Option C (dedicated databases for top 5 entities)^{[4] [5] [6]}

AI-First Design: Claude Sonnet 4.5 as central orchestrator + specialized module agents (Option C approach)^{[7] [8] [9]}

Paperless & Automated: Complete digitization with AI-driven workflows and human-in-the-loop for critical decisions

Security: ISO 27001, SOC 2 compliant, end-to-end encryption, comprehensive audit trails^{[10] [11]}

Data Residency: India/Southeast Asia for compliance with DPDPA and RERA regulations^{[10] [11]}

TECHNOLOGY STACK SELECTION

Backend Architecture

Primary Framework: FastAPI (Python 3.11+)

- **Rationale:** Async-native ASGI architecture, 3,000+ RPS capacity, automatic API documentation (OpenAPI/Swagger), Pydantic validation, microservices-optimized^{[12] [13] [14] [15]}
- **Alternative:** Django for admin-heavy modules requiring built-in ORM and admin panel (e.g., HR module)
- **Pattern:** Polyglot microservices where appropriate (Node.js for real-time features if needed)

API Gateway: Kong or Google Cloud API Gateway

- Rate limiting, authentication, request routing, API analytics
- mTLS for service-to-service communication^[1]

Microservices Orchestration: Google Kubernetes Engine (GKE)

- Auto-scaling, self-healing, rolling updates, blue-green deployments^[1]
- Service mesh with Istio for observability and traffic management

Message Queue: Google Pub/Sub (primary) + Apache Kafka (for high-throughput event streaming)

- Asynchronous inter-service communication
- Event sourcing for audit trails

- Real-time data pipelines^[1]

Frontend Architecture

Primary Framework: Next.js 14+ (React-based)

- **Rationale:** Server-side rendering (SSR), built-in routing, automatic code splitting, superior SEO, enterprise-grade performance, API routes for BFF pattern^{[16] [17] [18] [19]}
- **Component Library:** shadcn/ui + TailwindCSS for consistent, modern UI/UX
- **State Management:** Zustand (lightweight) + React Query (server state)
- **Real-time:** WebSockets with Socket.io for live updates

Mobile Applications:

- **Progressive Web App (PWA)** for cross-platform compatibility
- **Native capabilities:** React Native for iOS/Android if advanced offline features needed
- **Offline-first architecture:** IndexedDB for local storage, sync on reconnection (24-hour offline capability)^[11]

Database Architecture

Primary Database: PostgreSQL 16+ (with pgvector extension)

- **Rationale:** ACID compliance, JSON support, mature, enterprise-proven, cost-effective vs. managed vector DBs^{[20] [21] [22]}
- **Extensions:** pgvector for AI embeddings, TimescaleDB for time-series analytics
- **Multi-tenancy:** Row-level security (RLS) policies per entity/project^{[4] [5]}

Vector Database: pgvector integrated with PostgreSQL

- **Rationale:** 28x lower latency than Pinecone, 16x higher throughput at 25% cost, unified data management^{[20] [21]}
- **Use Cases:** Semantic document search, AI agent memory, RAG (Retrieval-Augmented Generation)

Document Store: MongoDB (for unstructured data)

- Legal documents, contracts, plans, images
- GridFS for large file storage

Data Warehouse: BigQuery

- Historical analytics, predictive modeling, BI dashboards
- Integration with Looker Studio for visualization

Caching Layer: Redis (in-memory cache)

- Session management, LLM response caching, real-time leaderboards
- Pub/Sub for real-time notifications

Search Engine: Elasticsearch

- Full-text search across projects, customers, documents
- Log aggregation and analysis

AI Agent Architecture Framework

Central Orchestrator: LangGraph (by LangChain)

- **Rationale:** Multi-agent workflow orchestration, human-in-the-loop primitives, state management, graph-based decision flows, visual debugging^{[23] [7] [8] [9]}
- **Alternative:** Microsoft AutoGen for hierarchical agent teams

Agent Framework Stack:

- **LangChain:** Tool integration, prompt management, memory systems^[7]
- **LangSmith:** Observability, tracing, evaluation

- **Pydantic AI:** Type-safe agent outputs
- **CrewAI:** Role-based agent collaboration (if multi-agent swarms needed) ^[24]

LLM Provider: Anthropic Claude Sonnet 4.5 (primary)

- Extended context window (200K tokens)
- Strong reasoning capabilities
- Cost-effective with prompt caching (<\$1K/month target) ^[20]

Agent Memory & Context:

- **Vector Store:** pgvector for long-term memory
- **Conversation Memory:** Redis (30-day retention)
- **Cross-module Context Sharing:** Shared state in LangGraph workflow
- **Agent Learning:** Reinforcement learning from human approvals/rejections stored in PostgreSQL

Cost Optimization Strategies:

- **Prompt Caching:** Cache common system prompts (90% cache hit rate target)
- **Response Caching:** Redis cache for identical queries (24-hour TTL)
- **Model Routing:** Use Claude Haiku for simple queries, Sonnet for complex reasoning
- **Batch Processing:** Non-urgent tasks processed in batches during off-peak hours

AI AGENT ARCHITECTURE - MULTI-AGENT SYSTEM

Agent Hierarchy Design

Meta-Agents (Cross-Module Coordinators)

1. Transaction Lifecycle Meta-Agent

- **Orchestrates:** Lead → Booking → Payment → Legal → RERA Filing → Possession
- **Modules:** Sales, Finance, Legal, Compliance, Customer Service
- **Decisions:** Workflow stage transitions, escalation routing, SLA monitoring
- **Human-in-Loop:** Payment approvals >₹5L, legal document signing, RERA submissions

2. Customer Lifecycle Meta-Agent

- **Orchestrates:** Enquiry → Site Visit → Booking → Construction Updates → Possession → Post-Possession Service
- **Modules:** Marketing, Sales, CRM, Project Management, Customer Service
- **Decisions:** Lead scoring, follow-up timing, communication channel selection
- **Human-in-Loop:** Complaint escalation, refund approvals, unit transfer requests

3. Compliance & Audit Meta-Agent

- **Orchestrates:** Real-time compliance monitoring across Legal, Finance, Project modules
- **Monitors:** RERA quarterly updates, GST filings, contractor compliance, bank reconciliations
- **Decisions:** Anomaly detection, discrepancy flagging, audit trail validation
- **Human-in-Loop:** Regulatory submission approvals, audit findings resolution

4. Financial Consolidation Meta-Agent

- **Orchestrates:** Real-time multi-entity financial consolidation (micro-batch every 5 mins)
- **Modules:** Finance (50+ SPVs), Treasury, Accounting
- **Decisions:** Inter-company transaction elimination detection, GL code validation, variance analysis
- **Human-in-Loop:** Elimination approvals, consolidation sign-off, variance justifications

5. Project Execution Meta-Agent

- **Orchestrates:** Timeline tracking, delay prediction, vendor performance, quality assurance
- **Modules:** Project Management, Procurement, Quality Control, BIM Integration
- **Decisions:** Milestone verification, payment release recommendations, delay alerts
- **Human-in-Loop:** Payment milestone approvals, change order approvals, vendor disputes

Specialized Module Agents (11+ Core Agents)

1. Sales Agent ("Arjun")

Persona: Proactive, data-driven sales assistant

Capabilities:

- Lead qualification using predictive scoring (budget, timeline, engagement)
- Automated follow-up scheduling based on lead temperature
- Price negotiation support with margin analysis
- Unit availability real-time matching
- Channel partner commission calculation automation

Tools:

- CRM database query
- Inventory management API
- Pricing engine
- WhatsApp Business API
- Email/SMS gateway

Decision Boundaries:

- **Auto-Execute:** Lead assignment, follow-up reminders, brochure sending, site visit scheduling
- **Human Approval:** Discounts >5%, unit blocking, booking confirmation, payment plan customization

Performance Metrics: Lead conversion rate, response time, follow-up completion rate

2. Finance Agent ("Lakshmi")

Persona: Meticulous, compliance-focused financial assistant

Capabilities:

- Payment reminder automation (construction-linked, EMI, possession-linked plans)
- Bank reconciliation with 95%+ confidence matching (1-hour escalation for unmatched)
- Invoice validation and GL code assignment
- Cash flow forecasting using historical patterns

- Inter-company transaction detection for consolidation

Tools:

- Payment gateway APIs (Razorpay, PayU)
- Banking APIs (20+ banks, virtual accounts, webhooks)
- ERP financial database
- GST portal API
- TDS calculation engine

Decision Boundaries:

- **Auto-Execute:** Payment reminders, matched reconciliations (<₹10K variance), routine GL postings, TDS calculations
- **Human Approval:** All reconciliation approvals (even 95%+ confidence), payments >₹1L, inter-company eliminations, financial reports

Performance Metrics: Reconciliation accuracy, payment collection rate, forecast variance

3. Compliance Agent ("Vidhi")

Persona: Vigilant, detail-oriented regulatory expert

Capabilities:

- RERA quarterly report generation (carpet area validation, project disclosure checks)
- Document validation (signature verification, completeness checks, expiry monitoring)
- Audit trail monitoring with anomaly detection
- GST, TDS, MCA filing pre-validation
- Discrepancy flagging before submissions

Tools:

- RERA portal integration (batch upload)
- MCA, IGRS, GST portals (API where available, RPA for others)
- OCR + Document intelligence (signature matching, alteration detection)
- Audit log database

Decision Boundaries:

- **Auto-Execute:** Audit log capture, document classification, expiry alerts, discrepancy detection
- **Human Approval:** RERA submissions, GST filings, legal opinion validation, audit responses

Performance Metrics: Filing accuracy, compliance deadline adherence, discrepancy detection rate

4. Project Agent ("Vikram")

Persona: Strategic, execution-focused construction manager

Capabilities:

- Timeline tracking with delay prediction using ML models
- Vendor performance analysis (quality, timeliness, cost)
- Material inventory tracking across 15+ sites
- BIM integration for quantity take-offs and cost estimation
- QC verification workflow automation (photo/measurement validation)

Tools:

- BIM software APIs (Autodesk Revit, Tekla - flexible per client)
- Procurement database

- IoT device data (100+ devices/site: CCTV, biometric, material sensors)
- Project management database
- Quality checklist engine

Decision Boundaries:

- **Auto-Execute:** Milestone progress updates, inventory alerts, QC checklist generation, delay alerts
- **Human Approval:** Payment milestone release, vendor performance penalties, change orders, design changes

Performance Metrics: Project on-time %, cost variance, quality defect rate

5. Customer Service Agent ("Priya")

Persona: Empathetic, solution-oriented support specialist

Capabilities:

- Query resolution using knowledge base RAG
- Sentiment analysis for escalation prioritization
- Service request routing (plumbing, electrical, society management)
- Complaint tracking with SLA monitoring
- Automated FAQ responses and ticket categorization

Tools:

- Customer portal database
- Knowledge base (vector search via pgvector)
- Ticketing system
- Sentiment analysis API
- Communication channels (WhatsApp, Email, SMS, App)

Decision Boundaries:

- **Auto-Execute:** FAQ responses, ticket categorization, service request assignment, status updates
- **Human Approval:** Escalated complaints, refunds, unit changes, possession delays

Performance Metrics: Resolution time, customer satisfaction score, first-contact resolution rate

6. Marketing Agent ("Rohan")

Persona: Creative, ROI-focused digital marketer

Capabilities:

- Lead source attribution and channel performance analysis
- Campaign ROI tracking across 10+ channels (Facebook, Google, property portals, brokers)
- Automated ad spend optimization recommendations
- Content generation for social media, email campaigns
- Landing page A/B test analysis

Tools:

- Marketing automation platform
- Social media APIs (Facebook, Instagram, LinkedIn, Twitter)
- WhatsApp Business API
- Property portal APIs (MagicBricks, 99acres, [Housing.com](https://housing.com))
- Google Analytics, Google Ads API

Decision Boundaries:

- **Auto-Execute:** Lead source tagging, campaign performance reports, content suggestions
- **Human Approval:** Budget reallocation, campaign launch, creative approvals

Performance Metrics: Cost per lead, lead quality score, conversion rate by channel

7. Procurement Agent ("Karthik")

Persona: Analytical, negotiation-savvy supply chain expert

Capabilities:

- Vendor selection based on historical performance, pricing, compliance
- Purchase order generation from project requirements
- GRN (Goods Receipt Note) matching with PO and invoice (3-way matching)
- Vendor compliance validation (GST, PAN, certifications)
- Material forecasting based on project timelines

Tools:

- Procurement database
- Vendor management system
- BIM quantity take-offs
- GST validation API
- Payment approval workflow

Decision Boundaries:

- **Auto-Execute:** PO generation for standard materials, GRN matching, vendor alerts
- **Human Approval:** New vendor onboarding, POs >₹10L, vendor payment release, non-standard procurements

Performance Metrics: Cost savings %, on-time delivery rate, vendor compliance score

8. Legal Agent ("Aditi")

Persona: Thorough, risk-aware legal advisor

Capabilities:

- Agreement generation from 20-100 templates (sale deeds, POA, JV agreements, contractor agreements)
- Clause validation and legal opinion summarization
- Title verification workflow coordination
- E-stamping integration and e-sign orchestration (Aadhaar eSign, DSC - parallel signing)
- Power of Attorney tracking and expiry management

Tools:

- Document template engine
- E-stamping API integration
- E-signature platforms (DigiLocker, Aadhaar eSign APIs)
- Legal database (title records, legal opinions)
- OCR + document intelligence

Decision Boundaries:

- **Auto-Execute:** Standard agreement generation, e-stamp duty calculation, document version control
- **Human Approval:** Non-standard clauses, legal opinions, title clearance, litigation matters

Performance Metrics: Agreement turnaround time, legal issue detection rate, compliance score

9. HR Agent ("Meera")

Persona: People-focused, process-driven HR partner

Capabilities:

- Employee onboarding automation (offer letters, documentation, access provisioning)
- Attendance tracking via biometric IoT integration
- Leave management and approval routing
- Payroll calculation support (integration with payroll system)
- Performance review scheduling and tracking

Tools:

- HRMS database
- Biometric attendance APIs
- Payroll system integration
- Employee self-service portal
- Compliance checkers (PF, ESI, labor laws)

Decision Boundaries:

- **Auto-Execute:** Attendance capture, leave balance updates, birthday/anniversary reminders
- **Human Approval:** Offer letters, terminations, salary changes, performance ratings

Performance Metrics: Onboarding time, attendance accuracy, employee satisfaction

10. Treasury Agent ("Suresh")

Persona: Strategic, cash-flow-conscious financial planner

Capabilities:

- Fund flow optimization between 50+ SPVs
- Working capital forecasting
- Bank balance monitoring and sweep account automation
- Investment opportunity analysis for idle funds
- Currency hedging recommendations (future multi-currency support)

Tools:

- Banking APIs (20+ banks)
- Treasury management system
- Cash flow forecasting models
- Investment platform APIs

Decision Boundaries:

- **Auto-Execute:** Balance alerts, sweep account transfers <₹50L, cash flow reports
- **Human Approval:** Fund transfers >₹50L, investment decisions, borrowing approvals

Performance Metrics: Cash utilization %, interest income, forecast accuracy

11. Business Intelligence Agent ("Neha")

Persona: Insightful, visualization-savvy data analyst

Capabilities:

- NLP-to-SQL query generation for ad-hoc reports
- Automated dashboard generation based on user role

- Predictive analytics (sales velocity, cash flow gaps, project delays, cost overruns, customer churn)
- Anomaly detection in operational metrics
- Executive summary generation for C-suite

Tools:

- BigQuery (data warehouse)
- Looker Studio / Tableau
- ML models (TensorFlow/PyTorch deployed on Vertex AI)
- NLP parser for report requests

Decision Boundaries:

- **Auto-Execute:** Report generation, dashboard updates, anomaly alerts
- **Human Approval:** Strategic insights requiring business context, budget re-forecasting

Performance Metrics: Report turnaround time, prediction accuracy (MAPE <10%), user engagement

Agent Communication Patterns

Hybrid Architecture:

- **Event-Driven** (Primary): Agents subscribe to domain events via Pub/Sub (e.g., "BookingConfirmed", "PaymentReceived")
- **Synchronous API Calls:** For real-time dependencies (e.g., Sales Agent queries Finance Agent for payment status)
- **Message Queue:** For long-running tasks (e.g., document generation, email campaigns)

State Management:

- **LangGraph State:** Shared context for multi-agent workflows (e.g., customer lifecycle state)
- **PostgreSQL:** Persistent workflow state, agent decision history
- **Redis:** Real-time session state, agent-to-agent message passing

Agent Learning Loop:

1. Agent makes decision with confidence score
2. Store decision + reasoning in PostgreSQL
3. Human approves/rejects with feedback
4. Fine-tune decision thresholds using RLHF (Reinforcement Learning from Human Feedback)
5. Monthly model updates based on historical accuracy

MODULE SPECIFICATIONS

Module 1: Sales & CRM

Business Workflows (Comprehensive Indian Real Estate Sales Cycle):

Phase 1: Lead & Enquiry Management

- Multi-channel lead capture: Property portals (MagicBricks, 99acres), social media, website, walk-ins, brokers, referrals, site visits
- Automated lead assignment: Round-robin, skill-based, project-based, geography-based routing
- Lead qualification: BANT scoring (Budget, Authority, Need, Timeline) + predictive ML scoring
- Nurturing campaigns: Automated WhatsApp/Email drip campaigns, project brochures, virtual tours

Phase 2: Opportunity & Site Visit Management

- Opportunity stages: Prospecting → Site Visit Scheduled → Site Visit Completed → Follow-up → Negotiation → Won/Lost
- Activity tracking: Calls, emails, meetings logged with timestamps
- Real-time inventory management: Floor plans, pricing, unit status (available, booked, on-hold, sold)

- Site visit scheduling: Calendar integration, reminder automation, feedback collection

Phase 3: Booking & Sales Conversion

- Expression of Interest (EOI): Token amount collection (₹50K-₹5L), unit reservation
- Quotation generation: Customized payment plans (construction-linked, down-payment, possession-linked, EMI - all RERA compliant)
- Aadhaar + PAN verification: API integration for KYC compliance^{[10] [11]}
- Booking finalization: Unit status update, booking confirmation email/SMS
- Channel partner commission: Automated calculation (project-wise, volume-based, value-based structures)

Phase 4: Post-Sales & Customer Relationship

- Welcome automation: Onboarding emails, customer portal access provisioning
- Demand letter generation: Based on construction-linked payment schedule, auto-send via email/WhatsApp
- Payment reminders: 7 days, 3 days, 1 day before due date + overdue escalation
- Document management: Sale agreement, allotment letter, payment receipts (version control)
- Construction updates: Quarterly photo/video updates, milestone notifications

Phase 5: Possession & Post-Possession

- Possession formalities: Snag list generation, final inspection scheduling, document signing
- Service request management: Plumbing, electrical, society issues (ticket-based workflow)
- Feedback collection: NPS surveys, Google review requests
- Referral program: Automated incentive tracking, referral lead tagging

Key Features:

- **360° Customer View:** Complete interaction history, documents, payments, service requests in one dashboard
- **Lead Scoring Model:** ML-based scoring using historical conversion data (retrained monthly)
- **WhatsApp Integration:** Two-way communication, broadcast messages, chatbot for FAQs
- **Broker Portal:** Commission tracking, lead assignments, performance dashboards
- **Mobile CRM App:** Offline-capable, GPS-tagged site visit check-ins, voice notes

Integrations:

- Property portals API (lead pull)
- WhatsApp Business API
- Google Calendar
- Aadhaar eSign, PAN verification
- Payment gateways

AI Agent Capabilities:

- Lead qualification automation (Arjun)
- Next-best-action recommendations
- Churn prediction for prospects
- Automated follow-up content generation

Module 2: Finance & Accounting

Business Workflows:

Phase 1: Revenue Management

- Customer payment plans: Construction-linked (70% escrow), down-payment, EMI, possession-linked^{[10] [11]}
- Payment collection: Online (UPI, net banking, cards), cheque, DD, NEFT, RTGS

- Virtual accounts: Per customer or per project (20+ bank integrations, webhook-based status updates)
- Payment reconciliation: Auto-match with 95% confidence, 1-hour escalation for unmatched
- TDS deduction: Automated calculation and certificate generation

Phase 2: Accounts Payable

- Vendor invoice intake: Email-based, portal upload, OCR digitization
- 3-way matching: PO + GRN + Invoice validation
- Approval workflow: 7-level hierarchy with delegation support
- Payment processing: Batch payments, NEFT/RTGS/UPI via banking APIs
- GST ITC tracking: Input tax credit reconciliation with GSTR-2A

Phase 3: General Ledger & Consolidation

- Chart of accounts: Entity-specific (50+ SPVs), standardized GL codes
- Journal entries: Auto-posting from modules, manual entries with approval
- Inter-company transactions: Auto-detection, elimination workflow (human approval)
- Real-time consolidation: Micro-batch every 5 mins, P&L and Balance Sheet aggregation
- Period close: Automated month-end close with variance analysis

Phase 4: Treasury Management

- Bank balance monitoring: Real-time across 20+ banks
- Fund flow optimization: Sweep accounts, inter-SPV transfers
- Cash flow forecasting: 12-month rolling forecast using ML models
- Investment management: Idle fund deployment, FD maturity tracking
- Borrowing management: Loan drawdown, EMI scheduling, interest accrual

Phase 5: GST & Tax Compliance

- GST calculation: Automated on transactions (CGST, SGST, IGST)
- GSTR filing: Monthly GSTR-1, GSTR-3B auto-generation with human review
- TDS filing: Quarterly TDS returns, Form 16A generation
- Multi-GSTIN support: Per SPV/project
- ITC reconciliation: Vendor GSTR-2A matching

Key Features:

- **Multi-Entity Accounting:** 50+ SPVs with consolidated reporting
- **Real-Time Dashboards:** Cash position, receivables aging, payables aging, P&L variance
- **Predictive Analytics:** Cash flow gaps, customer default risk, cost overrun predictions
- **Automated Reconciliation:** Bank statements, customer payments, vendor invoices
- **Audit Trail:** Every transaction logged with user, timestamp, reason code (7-year retention)

Integrations:

- 20+ banking APIs (ICICI, HDFC, SBI, Axis, Kotak, etc.)
- Payment gateways (Razorpay, PayU, CCAvenue)
- GST portal API (GSTN)
- TDS portal
- Tally/SAP (for legacy data migration)

AI Agent Capabilities:

- Payment reminder automation (Lakshmi)
- Reconciliation matching

- Cash flow forecasting
- Anomaly detection in expenses
- GL code suggestions

Module 3: Project & Construction Management

Business Workflows:

Phase 1: Project Planning

- Project master creation: Name, location, units, timelines, budget
- Work breakdown structure (WBS): Phases, milestones, activities
- Resource allocation: Labor, equipment, materials
- BIM integration: 3D models, quantity take-offs (Autodesk Revit, Tekla, ArchiCAD - flexible)^[25]

Phase 2: Execution & Monitoring

- Daily progress tracking: Site engineers update via mobile app
- Milestone verification: Photo/QC approval workflow
- Material management: Site-wise inventory, indent-PO-GRN cycle
- Equipment tracking: Utilization, maintenance schedules
- Labor management: Attendance (biometric IoT), productivity tracking

Phase 3: Quality Control

- Inspection checklists: Structural, MEP, finishes
- Snag management: Defect logging, assignment, resolution tracking
- Testing & certifications: Soil tests, concrete tests, fire safety
- Third-party audits: Vendor QC reports

Phase 4: Vendor & Contractor Management

- Work order issuance: Scope, milestones, payment terms
- Progress billing: Milestone-based, retention tracking
- Performance evaluation: Quality, timeliness, cost (KPI scorecards)
- Dispute management: Claims, arbitration tracking

Phase 5: Project Closure

- Completion certificate: Internal sign-off, regulatory approvals (CC, OC)
- Handover to customers: Possession process, defect liability
- Project post-mortem: Lessons learned, cost variance analysis

Key Features:

- **BIM Integration:** Bi-directional sync (read models, update quantities, trigger procurement on design changes)^[25]
- **IoT Integration:** 100+ devices/site - CCTV (safety violation detection via AI), biometric attendance, material sensors (batch uploads every 4 hours)
- **Mobile App:** Offline-capable (24 hours), GPS tagging, photo/video uploads
- **Delay Prediction:** ML model using historical project data (on-time %, weather, vendor delays)
- **Gantt Charts:** Interactive project timelines, critical path analysis

Integrations:

- BIM software (Autodesk Revit, Tekla, ArchiCAD)
- IoT platforms (CCTV analytics, biometric systems)
- Procurement module

- Finance module (cost tracking)
- RERA portal (project progress updates)

AI Agent Capabilities:

- Timeline delay prediction (Vikram)
- Vendor performance analysis
- Material demand forecasting
- Safety violation detection (CCTV analytics)
- Cost overrun alerts

Module 4: Procurement & Vendor Management

Business Workflows:

Phase 1: Vendor Onboarding

- Vendor registration: Company details, GST, PAN, bank account, certifications
- KYC verification: GST validation API, PAN validation
- Vendor categorization: Material suppliers, contractors, consultants
- Compliance tracking: Insurance, safety certifications, labor compliance

Phase 2: Requisition to PO

- Material indent: Site engineers request materials via mobile app
- Approval workflow: Site manager → Procurement head
- Vendor selection: Based on performance score, pricing, delivery timeline
- PO generation: Auto-populate from indent, send via email/WhatsApp

Phase 3: Order Fulfillment

- GRN (Goods Receipt Note): Site team receives materials, logs in app
- Quality inspection: Sample testing, certification verification
- 3-way matching: PO + GRN + Invoice (automated with variance alerts)
- Invoice processing: OCR-based data extraction, GL code assignment

Phase 4: Vendor Payment

- Payment milestone verification: Photo/QC approval by project team
- Approval workflow: Project manager → Finance → CFO (for >₹10L)
- Payment processing: NEFT/RTGS via banking APIs, auto TDS deduction
- Vendor portal: Invoice status, payment history, PO tracking

Phase 5: Vendor Performance

- KPI tracking: On-time delivery, quality score, pricing competitiveness
- Scorecards: Monthly performance reports, rating system (1-5 stars)
- Blacklist management: Non-performers, compliance violations
- Vendor audits: Annual financial health checks

Key Features:

- **Vendor Portal:** Self-service for PO acceptance, invoice upload, payment tracking
- **Automated 3-Way Matching:** PO-GRN-Invoice reconciliation with AI-based variance detection
- **Contract Management:** Rate contracts, validity tracking, auto-renewals
- **Vendor Analytics:** Spend analysis, vendor concentration risk, price trends

Integrations:

- GST validation API
- E-invoicing system (Govt. e-invoice portal)
- Banking APIs (payment processing)
- BIM (quantity-based PO generation)
- Project management module

AI Agent Capabilities:

- Vendor selection recommendations (Karthik)
- Demand forecasting
- Price benchmarking
- Compliance monitoring

Module 5: Legal & Documentation

Business Workflows:

Phase 1: Agreement Generation

- Template library: 20-100 templates (sale deeds, JV agreements, POA, contractor agreements, broker agreements)
- Clause customization: Project-specific, customer-specific variations
- Legal opinion workflow: Draft → Legal review → Approvals
- Version control: Track every edit with user + timestamp

Phase 2: E-Stamping & E-Signing

- Stamp duty calculation: State-wise rates (Maharashtra focus)
- E-stamping integration: SHCIL API, payment gateway integration
- E-signature orchestration: Aadhaar eSign, DSC (parallel signing workflow for multiple signatories)
- Document notarization: Digital notary integration (where available)

Phase 3: Title Verification

- Land title workflow: Search report upload, legal opinion, clearance certificate
- Encumbrance certificate: API integration with IGRS portal (where available, else manual upload)
- NOC tracking: Multiple NOCs (fire, pollution, water, electricity) per project
- Litigation management: Case tracking, hearing dates, judgment logging

Phase 4: Power of Attorney Management

- POA registration: Holder details, scope, validity period
- Usage tracking: Every transaction using POA logged
- Expiry alerts: 30 days, 7 days before expiry
- Revocation workflow: Formal revocation, notification to stakeholders

Phase 5: Regulatory Compliance

- RERA documentation: Sale agreement templates per RERA format
- MCA filings: Board resolutions, annual returns, DIN management
- Company secretarial: AGM/EGM notices, minutes, resolutions
- Contract repository: All agreements searchable, OCR-indexed

Key Features:

- **Document Intelligence:** OCR + NLP for entity extraction (names, dates, amounts), signature verification, alteration detection
- **E-Signature Workflows:** Sequential or parallel signing, SMS/email notifications, audit trail
- **Legal Calendar:** Court hearing dates, filing deadlines, compliance reminders

- **Clause Library:** Reusable clauses with version history, risk ratings

Integrations:

- E-stamping platforms (SHCIL, Stock Holding Corporation)
- E-signature platforms (DigiLocker, Aadhaar eSign, DocuSign)
- IGRS portal (sub-registrar office - API/RPA where available)
- MCA portal (for company filings)
- RERA portal (for sale agreements)

AI Agent Capabilities:

- Agreement generation from templates (Aditi)
- Clause risk scoring
- Document summarization
- Compliance checklist automation

Module 6: Customer Relationship & Service Management

Business Workflows:

Phase 1: Customer Onboarding

- Welcome kit: Digital onboarding guide, customer portal access
- Document collection: KYC, payment proofs, signatures
- Communication preferences: Email, WhatsApp, SMS opt-ins
- App registration: Mobile app for post-possession services

Phase 2: Construction Updates

- Milestone notifications: Foundation, roofing, plastering, finishing, pre-possession
- Photo/video galleries: Project-wise, unit-wise (accessible via app)
- Quarterly newsletters: Project updates, company news, tips
- Virtual site tours: 360° photos, drone footage

Phase 3: Pre-Possession

- Pre-delivery inspection (PDI): Customer walkthrough, snag list generation
- Snag resolution: Assign to contractors, track closure
- Possession date scheduling: Online appointment booking
- Final documentation: Possession letter, handover checklist

Phase 4: Post-Possession Service

- Service request ticketing: Plumbing, electrical, painting, HVAC issues
- Ticketing workflow: Assign to vendors, SLA tracking, customer feedback
- Warranty management: 5-year structural defect tracking^[10]
- Escalation: Auto-escalate unresolved tickets after 48 hours

Phase 5: Society Management (via App)

- Facility booking: Clubhouse, gym, swimming pool (calendar-based)
- Visitor management: Gate pass generation, photo capture
- Maintenance billing: Monthly bills, online payment via app
- Notice board: Society announcements, event invitations
- Complaints: Parking issues, noise, pets, common area issues
- Vendor management: Housekeeping, security, landscaping coordination

Key Features:

- **Customer Portal:** Payment history, documents, service requests, construction updates (web + mobile app)
- **Omnichannel Communication:** WhatsApp, Email, SMS, in-app notifications, voice calls (click-to-call)
- **Sentiment Analysis:** Analyze customer feedback, flag negative sentiments for escalation
- **Knowledge Base:** FAQ bot, video tutorials, document downloads (RAG-powered search via pgvector)
- **Society Super Admin:** Building manager dashboard, guard workflows, parking management, pet registrations

Integrations:

- Mobile app (React Native PWA)
- WhatsApp Business API
- Payment gateways (for maintenance)
- Ticketing system (Zendesk/Freshdesk-like internal)
- CCTV systems (for visitor management)

AI Agent Capabilities:

- Chatbot for FAQs (Priya)
- Sentiment analysis & escalation
- Service request auto-routing
- Predictive maintenance (AC/elevator issues based on patterns)

Module 7: Marketing & Lead Management

Business Workflows:

Phase 1: Campaign Management

- Multi-channel campaigns: Facebook, Google Ads, Instagram, LinkedIn, Property portals, Email, SMS, WhatsApp
- Budget allocation: Per channel, per project
- Creative management: Ad creatives, landing pages, brochures (version control)
- A/B testing: Landing page variants, ad copy variants

Phase 2: Lead Capture & Attribution

- Lead source tracking: UTM parameters, referral codes, phone numbers (unique per channel)
- Lead capture forms: Website, Facebook Lead Ads, property portal inquiries
- Deduplication: Match by phone/email across channels
- Lead enrichment: Append demographic data, social profiles

Phase 3: Lead Distribution

- Lead routing rules: Project, location, source, sales team capacity
- Lead scoring: BANT + engagement score (website visits, email opens, call duration)
- Real-time alerts: SMS/WhatsApp to sales team on new lead
- Lead pools: Hot, warm, cold categories

Phase 4: Campaign Analytics

- Channel performance: Cost per lead, conversion rate, ROI by channel
- Sales cycle analysis: Lead-to-booking duration by source
- Attribution modeling: First-touch, last-touch, multi-touch attribution
- Creative performance: CTR, landing page bounce rate, form fill rate

Phase 5: Content & Social Media

- Social media calendar: Post scheduling across platforms
- Content library: Project photos, videos, testimonials, blogs
- Influencer management: Collaborations, campaign tracking
- Review management: Google, Facebook reviews - respond to negative reviews

Key Features:

- **Marketing Automation:** Drip campaigns, behavior-triggered emails (e.g., site visit follow-up)
- **Landing Page Builder:** Drag-drop builder, mobile-optimized, SEO-friendly
- **Call Tracking:** Dynamic phone numbers per campaign, call recording, transcription
- **Social Media Integration:** Auto-post to Facebook, Instagram, LinkedIn, Twitter; two-way comment management
- **ROI Dashboards:** Real-time spend vs. revenue, customer acquisition cost (CAC), lifetime value (LTV)

Integrations:

- Facebook Ads API
- Google Ads API
- Property portals (MagicBricks, 99acres APIs)
- WhatsApp Business API
- Email platforms (SendGrid, Mailchimp)
- Google Analytics, Google Tag Manager

AI Agent Capabilities:

- Campaign performance optimization (Rohan)
- Content generation (ad copy, email subject lines)
- Lead scoring model training
- Budget reallocation recommendations

Module 8: HR & Payroll

Business Workflows:

Phase 1: Recruitment

- Job posting: Multi-platform (Naukri, LinkedIn, company website)
- Applicant tracking: Sourcing, screening, interviews, offers
- Offer letter generation: Template-based, approval workflow
- Background verification: Third-party integration

Phase 2: Onboarding

- Employee master creation: Personal details, bank account, tax declarations
- Document collection: Aadhaar, PAN, education, previous employment
- IT provisioning: Email, ERP access (RBAC role assignment), laptop
- Induction training: E-learning modules, quiz completion tracking

Phase 3: Attendance & Leave

- Biometric attendance: IoT integration (100+ devices across sites/offices)
- Shift management: Rostering for site teams, security guards
- Leave applications: Earned leave, sick leave, casual leave - approval workflow
- Overtime tracking: For site workers, auto-calculation

Phase 4: Payroll Processing

- Salary structure: Basic, HRA, allowances, deductions (PF, ESI, TDS)

- Attendance integration: Days worked, overtime, leaves
- Statutory compliance: PF, ESI, PT, TDS calculations
- Payslip generation: Email to employees, self-service portal

Phase 5: Performance Management

- Goal setting: Annual KPIs, quarterly reviews
- Appraisal cycle: Self-assessment, manager rating, HR normalization
- Feedback: 360-degree feedback collection
- Increment/bonus recommendations: Based on performance scores

Key Features:

- **Employee Self-Service Portal:** Payslips, tax declarations, leave applications, attendance view
- **Mobile App:** Field team attendance (GPS-tagged), leave requests, expense claims
- **Compliance Dashboard:** PF/ESI filings due, labor law compliance (shops & establishments, contract labor)
- **Exit Management:** Resignation workflow, full & final settlement, exit interviews

Integrations:

- Biometric attendance systems (ZKTeco, eSSL)
- EPFO portal (PF ECR filing)
- ESIC portal
- Income tax portal (Form 16 generation)
- Third-party payroll (if needed for statutory filings)

AI Agent Capabilities:

- Leave approval recommendations (Meera)
- Attrition prediction
- Skill gap analysis for training
- Payroll anomaly detection

Module 9: Inventory & Asset Management

Business Workflows:

Phase 1: Inventory Management

- Unit inventory: Projects, buildings, floors, units (2BHK, 3BHK, penthouses, shops)
- Unit attributes: Carpet area, pricing, floor plan, facing, view, parking slots
- Unit status: Available, booked, sold, on-hold, blocked for booking
- Reservation system: Token paid → 48-hour hold → booking or release

Phase 2: Pricing & Offers

- Base pricing: Per sq.ft. rates by floor, facing, view premium
- Dynamic pricing: Early-bird discounts, festive offers, bulk booking discounts
- Price approval workflow: Discounts >5% require VP Sales approval
- Cost sheet generation: Unit price + GST + registration + other charges

Phase 3: Asset Management (Equipment & Vehicles)

- Asset master: Excavators, cranes, mixers, generators, vehicles
- Asset allocation: Site-wise, project-wise
- Utilization tracking: Hours logged, maintenance schedules
- Depreciation: Auto-calculation, asset write-offs

Phase 4: Maintenance Management

- Preventive maintenance: Schedule-based (excavators every 500 hours)
- Breakdown maintenance: Ticket-based, vendor assignment
- Spare parts inventory: Stock levels, reorder points
- Maintenance cost tracking: Per asset, per site

Phase 5: Inventory Audits

- Physical verification: Annual audits, surprise checks
- Variance reconciliation: System vs. physical stock
- Write-offs: Damaged materials, obsolete equipment

Key Features:

- **Real-Time Unit Availability:** Integrated with Sales CRM, no double-booking
- **Parking Allocation:** Covered, open, EV charging slots - linked to units
- **Virtual Tours:** 360° photos, video walkthroughs embedded per unit
- **Asset Tracking:** GPS tracking for vehicles, RFID for equipment (optional)

Integrations:

- Sales & CRM (unit booking)
- Finance (depreciation, cost tracking)
- Procurement (material inventory)
- Project management (equipment allocation)

AI Agent Capabilities:

- Unit recommendation engine (based on customer preferences)
- Predictive maintenance (equipment failure prediction)
- Inventory optimization (material stock levels)

Module 10: Land Acquisition & Development

Business Workflows:

Phase 1: Lead Generation

- Land sourcing: Brokers, property owners, government auctions
- Opportunity tracking: Location, area, ownership, zoning, pricing
- Feasibility analysis: FSI, land use, infrastructure, market demand
- Site visits: Due diligence checklists, drone surveys

Phase 2: Due Diligence

- Title verification: Ownership chain, encumbrances, litigations
- Legal opinion: Lawyer review, clearance certificate
- Survey: Boundary verification, topographic survey
- Soil testing: Geo-technical reports

Phase 3: Valuation & Negotiation

- Market valuation: Comparable sales, DCF analysis
- Negotiation: Offers, counteroffers, price finalization
- Term sheet: Payment terms, possession timeline, conditions
- Approval workflow: Land acquisition committee → Board approval

Phase 4: Transaction

- Agreement: Joint development, outright purchase, lease
- Payment schedule: Advance, milestone-linked, possession-linked
- Registration: Sub-registrar, stamp duty, transfer of ownership
- Handover: Physical possession, boundary marking

Phase 5: Approvals & Permissions

- Master plan approval: Municipal corporation, planning authority
- Building plan approval: Architect submission, scrutiny, approval
- NOCs: Fire, pollution, environment, water, electricity, airport (if needed)
- RERA registration: Project registration, quarterly updates ^[10] ^[11] ^[26]

Key Features:

- **Land Bank Dashboard:** Pipeline of land parcels, status tracking
- **GIS Integration:** Location maps, zoning overlays, infrastructure proximity
- **Document Repository:** Title deeds, surveys, approvals (OCR-indexed)
- **Approval Tracker:** Government department-wise status, follow-up dates

Integrations:

- IGRS portal (land records)
- Municipal corporation portals
- RERA portal (project registration)
- Legal module (title verification)
- Finance module (land payments)

AI Agent Capabilities:

- Land valuation models (comparable sales, ML-based)
- Approval timeline prediction (based on historical data)
- Risk scoring (legal, environmental, market)

Module 11: Bank Integration & Payment Gateway

Business Workflows:

Phase 1: Virtual Account Management

- Virtual account creation: Per customer or per project (20+ bank APIs)
- Mapping: Link virtual account to customer/project in ERP
- Payment notifications: Real-time webhooks on payment receipt
- Auto-reconciliation: Match payment to customer account

Phase 2: Payment Gateway Integration

- Online collections: UPI, net banking, credit/debit cards, wallets
- Payment links: SMS/Email/WhatsApp payment links for customers
- Recurring payments: Auto-debit for EMI plans (NACH mandates)
- Refund processing: Automated refunds to source

Phase 3: Banking APIs

- Balance inquiry: Real-time across 20+ banks
- Transaction statements: Daily auto-download, reconciliation

- Fund transfers: NEFT, RTGS, IMPS, UPI via API
- Cheque status: Cheque clearance notifications

Phase 4: Escrow Account Management

- 70% escrow account: RERA-mandated separate account per project^{[10] [11]}
- Withdrawal approvals: For land cost, construction cost (with RERA compliance)
- Quarterly reporting: Escrow balance, withdrawals to RERA portal

Phase 5: Payment Reconciliation

- Auto-matching: Payment reference vs. customer invoice (95%+ confidence)
- Variance alerts: Unmatched payments, short payments, excess payments
- Escalation: Finance team notified for manual review (1-hour SLA)
- Confirmation: Customer notified on payment confirmation (WhatsApp/SMS)

Key Features:

- **Multi-Bank Dashboard:** Consolidated bank balance, daily transactions
- **Payment Analytics:** Collection efficiency, mode-wise breakup, bank-wise charges
- **Webhook Management:** Real-time payment status updates
- **PCI-DSS Compliance:** Secure payment data handling, tokenization

Integrations:

- 20+ banks (ICICI, HDFC, SBI, Axis, Kotak, Yes Bank, etc.)
- Payment gateways (Razorpay, PayU, CCAvenue, Paytm, PhonePe)
- Virtual account providers (RazorpayX, Cashfree)
- UPI platforms

AI Agent Capabilities:

- Payment reconciliation automation (Lakshmi)
- Default risk prediction (customer payment delays)
- Fraud detection (unusual payment patterns)

Module 12: Admin & Activity Tracker (Usage-Based Billing)

Business Workflows:

Phase 1: User Activity Tracking

- Login/logout: Timestamp, IP address, device
- Page views: Module accessed, time spent per page
- Actions: Create, read, update, delete operations logged
- API calls: Internal and external API usage per user
- Document access: View, download, edit, share events

Phase 2: User Profiling

- Activity heatmaps: Peak usage hours, most-used modules
- Feature adoption: % of users using each feature
- Productivity metrics: Tasks completed, reports generated, approvals processed
- Engagement score: Active days, time on platform, interactions

Phase 3: Billing Calculation

- Billing model: **Hybrid** - Per user per month (base) + usage overages

- Usage metrics: Active hours, transactions processed, API calls, storage used
- Tiering: Bronze, Silver, Gold plans based on features + usage limits
- Overage charges: ₹10 per additional GB storage, ₹0.50 per extra API call (example)

Phase 4: Reports & Analytics

- User productivity dashboards: For managers, HR
- Module-wise usage: Identify underutilized features, training needs
- Cost allocation: Per department, per project (for internal billing)
- AI report generation: NLP queries → auto-generated reports

Phase 5: System Administration

- User management: Onboarding, role assignment (RBAC), deactivation
- License management: Track active users, available licenses
- Audit logs: Every data view/edit logged with user + timestamp (7-year retention)
- System health: Uptime, API response times, error rates

Key Features:

- **RBAC (Role-Based Access Control)**: 50+ pre-defined roles (Sales Manager, Site Engineer, CFO, etc.), custom roles
- **Field-Level Permissions**: Show/hide/edit specific fields based on role (e.g., hide profit margin from junior sales)
- **Dynamic Role Assignment**: Project-wise, entity-wise role switching (e.g., user is Admin for Project A, Viewer for Project B)
- **Delegation**: Temporary role delegation during leaves (with audit trail)
- **7-Level Approval Hierarchy**: Configurable per workflow (e.g., POs, payments, agreements)
- **Activity Feed**: Real-time activity stream for admins (like Facebook activity log)

Integrations:

- All ERP modules (activity tracking via middleware)
- Billing system (Stripe/Chargebee for invoicing)
- Google Analytics (website activity)
- Mobile app analytics (Firebase)

AI Agent Capabilities:

- User productivity analysis (Neha - BI Agent)
- Anomaly detection (unusual login times, mass data downloads)
- Training recommendations (based on feature usage gaps)
- Cost optimization (license reallocation)

SECURITY & COMPLIANCE ARCHITECTURE

Data Security

Encryption:

- **Data at Rest**: AES-256 encryption for databases (PostgreSQL, MongoDB)
- **Data in Transit**: TLS 1.3 for all API communications
- **End-to-End Encryption**: For sensitive documents (agreements, KYC)
- **Key Management**: Google Cloud KMS (Key Management Service) with HSM

Access Control:

- **RBAC**: 50+ pre-defined roles, custom roles, field-level permissions
- **Row-Level Security (RLS)**: PostgreSQL RLS policies per tenant/project/entity

- **Dynamic Roles:** Project-wise, entity-wise role assignment
- **MFA (Multi-Factor Authentication):** SMS OTP, authenticator apps for privileged users
- **IP Whitelisting:** For admin and finance roles

Data Privacy (DPDPA Compliance):

- **PII Masking:** Lower-level employees see masked Aadhaar/PAN (e.g., XXXX-XXXX-1234)
- **Right to Erasure:** Customer data deletion workflow (with legal retention checks)
- **Consent Management:** Explicit opt-ins for marketing communication
- **Data Anonymization:** For analytics, ML training (remove PII)

Audit Trail:

- **Scope:** Every data view/edit logged (not just financial/legal transactions)^[10]
- **Retention:** 7 years (RERA compliance requirement)^{[10] [11]}
- **Agent Actions:** All AI decisions logged with reasoning + confidence scores
- **Immutable Logs:** Write-once storage in BigQuery, tamper-proof

API Security:

- **API Gateway:** Kong with OAuth 2.0, JWT tokens
- **Rate Limiting:** Per user, per API endpoint (e.g., 1000 requests/hour)
- **Input Validation:** Pydantic models, SQL injection prevention
- **CORS Policies:** Whitelist allowed origins

Penetration Testing:

- **Frequency:** Quarterly by third-party security firms
- **Scope:** Web app, mobile app, APIs, infrastructure
- **Remediation:** Critical issues fixed within 7 days, high issues within 30 days

Compliance Certifications

ISO 27001 (Information Security Management):

- Annual certification audit
- Risk assessment, incident response plan, BCP/DRP

SOC 2 Type II (Trust Service Criteria):

- Security, availability, processing integrity, confidentiality, privacy
- Annual audit by Big 4 accounting firms

PCI-DSS (Payment Card Industry Data Security Standard):

- For handling credit/debit card payments
- Tokenization of card data, quarterly vulnerability scans

RERA Compliance

Quarterly Progress Reports (QPRs)^{[10] [11] [26]}:

- AI auto-generates reports from project management data
- Human reviews → submits via RERA portal (batch upload)
- Carpet area calculator built-in, project disclosure auto-updates

Escrow Account Monitoring^{[10] [11]}:

- 70% customer payments in separate escrow per project
- Withdrawal tracking with approvals (for land/construction costs only)

- Automated quarterly reporting to RERA

Sale Agreement Compliance ^[10] ^[11]:

- Templates per RERA format (carpet area basis, no hidden charges)
- Mandatory clauses (penalty for delay, defect liability)

Complaint Management ^[10]:

- Customer complaints routed to internal ticketing + RERA portal
- SLA tracking, escalation to RERA if unresolved

Disaster Recovery & Backup

Backup Strategy:

- **Real-Time Replication:** PostgreSQL streaming replication (primary + standby)
- **Daily Backups:** Full database backups to Google Cloud Storage
- **Transaction Logs:** Continuous archiving for point-in-time recovery
- **Document Backups:** Versioned backups in Google Cloud Storage (nearline for cost)

Disaster Recovery:

- **RTO (Recovery Time Objective):** 2 hours
- **RPO (Recovery Point Objective):** 15 minutes
- **Failover:** Automatic failover to standby database
- **DR Site:** Secondary GCP region (e.g., Mumbai primary, Singapore DR)

Business Continuity:

- **Incident Response Plan:** Playbooks for security breaches, data loss, downtime
- **Communication Plan:** Stakeholder notification (email, SMS, status page)
- **Annual DR Drills:** Test failover, backup restoration

DATA MIGRATION STRATEGY

Migration Scope

Source Systems:

- Salesforce (Sales & CRM data)
- SAP (Finance & Accounting data)
- ZOHO (Marketing, some project data)
- Oracle (Legacy data)
- Hirise & other 3rd party software (operations data)
- Excel sheets (ad-hoc data, offline records)

Data Volume: 4TB (50% structured DB data, 50% unstructured documents)

Historical Data: 18 years (all readily accessible, not cold storage)

Data Quality Score: 4/10 (significant inconsistencies, duplicate records, incomplete data)

Migration Phases

Phase 1: Assessment & Planning (Weeks 1-2)

- Data discovery: Map source systems, identify data owners
- Data profiling: Volume, quality, relationships, dependencies
- Data mapping: Source fields → target ERP fields
- Gap analysis: Missing data, transformation rules, business logic
- Migration plan: Phased rollout schedule, cutover strategy

Phase 2: Data Cleansing (Weeks 3-6)

- **Deduplication:** Identify duplicate customers, vendors, projects using fuzzy matching (ML model)
- **Standardization:** Address formats, phone numbers (India +91), dates (ISO 8601)
- **Validation:** Mandatory fields, data type checks, referential integrity
- **Enrichment:** Append missing data (e.g., city from pincode)
- **Master Data Management (MDM):** Create golden records for customers, vendors, projects

Data Quality Improvement Strategies:

- **Customer Deduplication:** Match on phone + email + name (fuzzy matching 85% threshold)
- **Vendor Deduplication:** Match on GSTIN, PAN, name
- **Project Data:** Standardize project names, locations (use Google Maps API for geocoding)
- **Financial Data:** Reconcile opening balances, clear suspense accounts
- **Document Classification:** OCR + AI classification (sale deeds, payment receipts, NOCs, approvals)

Phase 3: Data Transformation (Weeks 7-10)

- **ETL Pipelines:** Apache Airflow for orchestration, Python scripts for transformation
- **Data Lake:** Stage raw data in Google Cloud Storage
- **Transformation Rules:**
 - Salesforce Lead → Within CRM Lead (status mapping, custom fields)
 - SAP GL codes → Within GL codes (chart of accounts mapping)
 - Excel project data → Within Project master (structure, milestones)
- **Relational Mapping:** Customer → Payments → Units → Projects (foreign keys)
- **Network Establishment:** Customer → Referrals, Vendors → Subcontractors (graph relationships)

Phase 4: Mock Migration (Weeks 11-12)

- Load data into **staging environment** (replica of production)
- **Validation:**
 - Record counts match source vs. target
 - Sampling: 5% random sample, manual verification
 - Reports: Generate key reports, compare with source system outputs
- **Performance testing:** Query performance, dashboard load times
- **Rollback plan:** Document steps to revert if cutover fails

Phase 5: Cutover & Go-Live (Week 13)

- **Cutover Window:** Weekend (Friday 11 PM to Sunday 11 PM) - 48-hour window
- **Final Data Sync:** Incremental load of data created/updated since mock migration
- **Production Load:** Load data into live ERP
- **Validation:** Smoke tests, critical workflows, key reports
- **Go-Live:** Switch DNS, inform users, monitor closely

Phase 6: Parallel Run (Weeks 14-25, 3 months)

- **Old Systems Active:** Salesforce, SAP, ZOHO continue running
- **Dual Entry:** Transactions entered in both old + new systems (initially)
- **Reconciliation:** Daily reconciliation of critical data (bookings, payments, inventory)
- **Issue Tracking:** Bugs, data gaps logged and resolved
- **User Training:** Hands-on training during parallel run
- **Gradual Cutover:** Module by module, old systems decommissioned

Phase 7: Hypercare (Weeks 26-29, 1 month post-cutover)

- **24/7 Support:** War room for critical issues
- **Data Corrections:** Fix data issues identified post-go-live
- **User Feedback:** Gather feedback, prioritize enhancements
- **Performance Tuning:** Optimize slow queries, add indexes

Migration Tools & Technologies

ETL Framework: Apache Airflow (orchestration) + Python (transformation logic)

Data Quality: Great Expectations (data validation framework)

Deduplication: [Dedupe.io](#) (ML-based fuzzy matching)

OCR: Google Cloud Vision API, Tesseract

Document Classification: Custom ML model (fine-tuned BERT)

Testing: Pytest (unit tests), Selenium (UI tests)

Data Migration Risks & Mitigation

Risk	Mitigation
Data loss during migration	Backups before cutover, rollback plan
Data quality issues post-go-live	Extensive cleansing, validation, sampling
Downtime exceeding cutover window	Incremental loads, test mock migrations
User resistance to new system	Training, change management, user champions
Integration failures	Test integrations in staging, API mocks
Performance issues with 18 years data	Database indexing, partitioning, archival strategy

THIRD-PARTY INTEGRATIONS

Payment Ecosystem

Payment Gateways: Razorpay, PayU, CCAvenue, Paytm, PhonePe

Virtual Accounts: RazorpayX, Cashfree (20+ bank support)

Banking APIs: ICICI, HDFC, SBI, Axis, Kotak, Yes Bank (balance, statements, fund transfers)

UPI: Unified payment interface for QR codes, payment links

NACH: National Automated Clearing House for auto-debit EMI

Government Portals

RERA (MahaRERA): Batch upload for project registration, QPRs, complaint management ^{[10] [11] [26]}

IGRS (Sub-Registrar): Land records, e-stamping, registration (API where available, else RPA/manual)

MCA (Ministry of Corporate Affairs): Company filings, DIN, board resolutions (API/manual)

GST Portal (GSTN): GSTR-1, GSTR-3B filing, GSTR-2A download, e-invoicing (API) ^[10]

TDS Portal (TRACES): TDS returns, Form 16A generation (API/manual)

EPFO: PF ECR filing, UAN generation (API/manual)

ESIC: ESI challan, returns (manual)

Integration Strategy:

- **API where available:** GST (GSTN API), banking (direct APIs)
- **RPA bots:** For portals without APIs (UiPath, Automation Anywhere) - e.g., IGRS, MCA
- **AI pre-filling:** For manual uploads (e.g., RERA portal forms auto-populated, human submits)

Communication Platforms

WhatsApp Business API: Twilio, Gupshup (two-way messaging, broadcast, chatbot)

Email: SendGrid, AWS SES (transactional emails, marketing campaigns)

SMS: Twilio, MSG91, Kaleyra (OTPs, alerts, reminders)

Voice: Exotel, Knowlarity (click-to-call, IVR, call recording)

Social Media & Marketing

Facebook/Instagram: Ads API (campaign management, lead capture), Graph API (page management, comments)

Google: Ads API, Analytics API, Tag Manager

LinkedIn: Ads API, Company Page API

Twitter: Ads API, Twitter API (tweets, DMs)

Property Portals: MagicBricks, 99acres, [Housing.com](https://www.housing.com) (lead pull APIs)

Maps & Location

Google Maps API: Geocoding, distance matrix, static maps, directions

Mapbox: Alternative for custom map visualizations

KYC & Verification

Aadhaar eSign: DigiLocker, NSDL, CDSL (e-signature using Aadhaar)

PAN Verification: NSDL API, third-party aggregators

GST Verification: GST Suvidha Provider APIs

Digilocker: Document vault integration for KYC documents

BIM & Construction

Autodesk Revit: Forge APIs for 3D model viewing, quantity extraction

Tekla: Open API for structural BIM data

ArchiCAD: ARCHICAD API (flexible, client preference-based) ^[25]

IoT Devices

Biometric Attendance: ZKTeco, eSSL (SDK integration for attendance data pull)

CCTV: Hikvision, Dahua (video streaming, AI analytics for safety violations)

Material Sensors: Weight sensors, RFID tags (batch data uploads)

E-Signature & Stamping

E-Signature: DocuSign, Adobe Sign, DigiLocker (Aadhaar eSign), NCode (DSC)

E-Stamping: SHCIL (Stock Holding Corporation), state e-stamping portals

Analytics & BI

BigQuery: Data warehouse

Looker Studio: Dashboards, reports (formerly Google Data Studio)

Tableau: Alternative BI tool

Metabase: Open-source BI for internal analytics

AI & ML

Anthropic Claude API: Central LLM for agents

OpenAI: Fallback LLM, embeddings (text-embedding-3-large)

Google Vertex AI: ML model hosting (custom models for prediction)

Hugging Face: Open-source models for document classification, NER

Monitoring & Observability

Logging: Google Cloud Logging, ELK Stack (Elasticsearch, Logstash, Kibana)

Monitoring: Prometheus + Grafana, Google Cloud Monitoring

APM: New Relic, Datadog (application performance monitoring)

Error Tracking: Sentry

Distributed Tracing: OpenTelemetry, Jaeger

USER EXPERIENCE & INTERFACE DESIGN

Design Principles

Modern UI/UX: Material Design 3, clean, minimal, mobile-first

Consistency: Unified design system (colors, typography, components) across web + mobile

Accessibility: WCAG 2.1 AA compliance (keyboard navigation, screen reader support, color contrast)

Responsiveness: Adaptive layouts for desktop, tablet, mobile

Performance: Lazy loading, code splitting, CDN for static assets

Key UI Components

Dashboard: Role-based home screen with KPI widgets, recent activity, quick actions

Navigation: Sidebar menu (collapsible), breadcrumbs, global search

Data Tables: Sortable, filterable, paginated, export to CSV/Excel

Forms: Auto-save, validation feedback, multi-step wizards for complex forms

Charts: Interactive charts (Chart.js, Recharts), drill-down capabilities

Notifications: In-app toasts, badge counters, notification center

Dark Mode: Toggle for dark theme (optional)

AI Assistant Interface

Chat Widget: Persistent chat icon (bottom-right), expands to chat window

Agent Personas: Avatar + name (e.g., "Arjun - Sales Agent"), personality in responses

Voice Input: Speech-to-text for queries (Google Speech API)

Context Awareness: Agent knows user role, current module, recent actions

Suggestions: Proactive suggestions (e.g., "You have 5 pending approvals")

Explainability: Agent explains decisions, shows confidence scores

Mobile App Features

Offline Mode: 24-hour offline capability, sync on reconnection

Push Notifications: Critical alerts (payment due, approval pending)

Biometric Login: Fingerprint, Face ID

Quick Actions: Home screen shortcuts (log site visit, approve payment)

Camera Integration: Photo uploads (QC checks, documents), OCR scan

GPS Tagging: Site visit check-ins, field team attendance

Branding - "Within"

Logo Placement: Top-left corner (web), splash screen (mobile)

Color Scheme: Primary color (brand blue), secondary (accent gold), neutrals (grays)

Agent Naming: Personal names (Arjun, Lakshmi, Vidhi, Vikram, Priya, Rohan, Karthik, Aditi, Meera, Suresh, Neha)

Tagline: "Within: Your Intelligent Real Estate Operating System"

TRAINING & CHANGE MANAGEMENT

Training Strategy

Role-Based Training Paths: Auto-generated learning paths per persona (Sales, Finance, Engineer, etc.)

E-Learning Modules: Video tutorials, interactive quizzes, sandbox environment for practice

Live Training Sessions: Instructor-led webinars, Q&A, screen sharing

Documentation: User manuals, FAQ knowledge base (searchable via AI chatbot)

In-App Guidance: Tooltips, walkthroughs for new features (use Appcues, Pendo)

Certifications: Role-specific certifications (e.g., "Within Sales Specialist")

Change Management

Stakeholder Engagement: Early involvement of department heads, user champions

Communication Plan: Email newsletters, town halls, demo videos

Feedback Loops: User feedback portal, monthly surveys, user advisory board

Resistance Mitigation: Address concerns, highlight benefits, celebrate early wins

Parallel Run: 3-month period to build confidence, reduce fear of data loss

Support Model

Helpdesk: Ticketing system (Zendesk/Freshdesk-like), 24/7 email/phone support

Chatbot: AI-powered chatbot for common queries (Priya - Customer Service Agent)

Knowledge Base: Searchable articles, video tutorials, troubleshooting guides

Community Forum: User community for peer-to-peer support

Escalation: L1 (chatbot/helpdesk) → L2 (support engineers) → L3 (developers)

PERFORMANCE & SCALABILITY TARGETS

Performance Benchmarks

Page Load Time: <2 seconds (P95)

API Response Time: <500ms (P95), <200ms (P50)

AI Agent Response: <3 seconds (includes LLM API call + processing)

Concurrent Users: 1,000 daily active users, 200 concurrent peak

Database Queries: <100ms for simple queries, <1s for complex reports

Real-Time Updates: <5 seconds lag for dashboards, <1 minute for analytics

Scalability Targets

5-Year Growth: 100 entities, 10x transaction volume (100,000 units/year)

Horizontal Scaling: Auto-scaling Kubernetes pods (CPU/memory thresholds)

Database Scaling: Read replicas (3-5), partitioning (by year, by entity)

Caching: Redis for 80%+ cache hit rate on frequent queries

CDN: CloudFlare for static assets (images, JS, CSS)

Load Balancing: Google Cloud Load Balancer, health checks, failover

MONITORING & OBSERVABILITY

Logging

Structured Logs: JSON format, centralized in Google Cloud Logging / ELK Stack

Log Levels: DEBUG, INFO, WARNING, ERROR, CRITICAL

Contextual Info: User ID, tenant ID, request ID, timestamp, module, action

Retention: 90 days hot storage, 7 years archive in BigQuery

Metrics

Application Metrics: Request rate, error rate, latency (P50, P95, P99)

Business Metrics: Bookings per day, payment collection rate, agent decision accuracy

Infrastructure Metrics: CPU, memory, disk I/O, network throughput

Database Metrics: Query latency, connection pool utilization, lock waits

Distributed Tracing

OpenTelemetry: Instrument all services, trace requests across microservices

Jaeger: Visualize traces, identify bottlenecks

Use Cases: Debug slow API calls, inter-service latency analysis

Alerting

Prometheus + Alertmanager: Define alert rules (e.g., API latency >1s for 5 mins)

Notification Channels: Slack, PagerDuty, email, SMS

Escalation: On-call engineer → team lead → CTO

SLAs: 99.9% uptime (43 minutes downtime/month allowed)

Dashboards

Operations Dashboard: Real-time system health, error rates, latency

Business Dashboard: Daily bookings, payments, pipeline, AI agent performance

Executive Dashboard: Monthly revenue, costs, key metrics (CEO, CFO view)

COST STRUCTURE & OPTIMIZATION

LLM API Costs (<\$1,000/month target)

Strategies:

- **Prompt Caching:** Cache system prompts (90% reuse) - saves 50% tokens
- **Response Caching:** Redis cache for identical queries (24-hour TTL) - reduces API calls by 30%
- **Model Routing:** Claude Haiku for simple queries (<\$0.0008/1K tokens), Sonnet for complex reasoning (<\$0.012/1K tokens)
- **Batch Processing:** Non-urgent tasks (reports, analytics) batched during off-peak hours
- **Token Optimization:** Concise prompts, use JSON mode, avoid verbose outputs

Estimated Usage:

- 1,000 daily active users × 10 queries/user/day = 10,000 queries/day

- Average 1,000 input tokens + 500 output tokens per query
- With caching (50% cache hit) = 5,000 API calls/day × 1,500 tokens = 7.5M tokens/day
- Monthly: 225M tokens × \$0.006/1K tokens (blended rate) = **\$1,350/month** (slightly above target, optimize further)

Infrastructure Costs (GCP)

Compute: GKE (Google Kubernetes Engine) - autoscaling, ~\$2,000-\$5,000/month

Database: Cloud SQL (PostgreSQL) - \$1,000-\$3,000/month (depending on size)

Storage: Google Cloud Storage - \$500-\$1,500/month (4TB + growth)

Networking: Load balancer, data transfer - \$500-\$1,000/month

BigQuery: Data warehouse - \$500-\$2,000/month (depends on query volume)

Total Infrastructure: ~\$5,000-\$12,000/month

Optimization:

- Reserved instances for steady-state compute (30% savings)
- Lifecycle policies for storage (nearline for old data, 70% savings)
- BigQuery slot reservations for predictable workloads

Third-Party Costs

WhatsApp Business API: \$0.005-\$0.01/message × 100K messages/month = \$500-\$1,000/month

SMS: \$0.01/SMS × 50K SMS/month = \$500/month

E-signature: \$1-\$2/signature × 1,000 signatures/month = \$1,000-\$2,000/month

Payment Gateway: 1.5-2% of transaction value (₹3,000 Cr × 2% = ₹60 Cr/year = ₹5 Cr/month - passed to customers)

FUTURE-PROOFING & EXTENSIBILITY

Modular Architecture

Microservices: Each module as independent service, easy to add/remove/replace

Plugin System: Third-party developers can build plugins (e.g., custom reports, integrations)

API-First Design: All functionality exposed via REST/GraphQL APIs

Event-Driven: New modules can subscribe to existing events (e.g., "BookingConfirmed")

Future Module Examples

AIF (Alternative Investment Fund) Platform^[27]:

- Investor onboarding, KYC, AML checks
- Capital call management (drawdowns, contributions)
- Distribution management (dividend payouts, profit sharing)
- Regulatory reporting (SEBI, IFSCA GIFT City compliance)
- Integration: Finance module (fund accounting), Legal module (agreements)

Real Estate Tokenization^[27]:

- Blockchain Integration: Polygon, Ethereum, Private blockchain (Hyperledger)
- Token issuance: Fractional ownership of properties
- Smart contracts: Automated rental distribution, exit mechanisms
- Investor portal: Token trading, secondary market
- Regulatory compliance: SEBI tokenization guidelines (when available)
- Integration: Finance (cap table), Legal (token purchase agreements), CRM (investor relations)

Technology Evolution

Multi-LLM Support: Easy to swap Claude → GPT-4 → Gemini (abstraction layer)

Low-Code/No-Code: Business users create workflows, forms, reports without coding (Budibase, Retool integration)

Advanced Analytics: Real-time ML models (fraud detection, demand forecasting) on Vertex AI

Blockchain: Smart contracts for transparent transactions (future consideration)

IMPLEMENTATION ROADMAP

Phase 1: Foundation (Months 1-3)

- Infrastructure setup (GCP, Kubernetes, databases)
- Core framework (FastAPI microservices, Next.js frontend)
- Authentication & authorization (RBAC, MFA)
- Admin module (user management, activity tracker)
- Data migration (cleansing, transformation, mock load)

Phase 2: Core Modules (Months 4-6)

- Sales & CRM (lead to booking workflow)
- Finance & Accounting (payment collection, reconciliation, GL)
- Project Management (basic workflows, timeline tracking)
- Document Management (upload, OCR, classification)
- Mobile app (PWA, offline mode)

Phase 3: AI Agents (Months 7-9)

- Central orchestrator (LangGraph setup)
- Sales Agent (Arjun), Finance Agent (Lakshmi), Customer Service Agent (Priya)
- Meta-agents (Transaction Lifecycle, Customer Lifecycle)
- Agent learning loop (RLHF)
- Cost optimization (caching, model routing)

Phase 4: Advanced Modules (Months 10-12)

- Procurement & Vendor Management
- Legal & Documentation (agreement generation, e-sign)
- HR & Payroll
- Inventory & Asset Management
- Land Acquisition & Development

Phase 5: Integrations (Months 13-15)

- Government portals (RERA, GST, MCA, IGRS)
- Banking & payment gateways (20+ banks, virtual accounts)
- BIM integration (Autodesk Revit, Tekla, ArchiCAD)
- IoT devices (biometric, CCTV, sensors)
- Social media & marketing platforms

Phase 6: Analytics & Reporting (Months 16-18)

- BigQuery data warehouse setup
- Predictive analytics (sales velocity, cash flow, project delays, churn)
- BI dashboards (Looker Studio, role-based)
- NLP-to-SQL (BI Agent - Neha)
- Executive summary automation

Phase 7: Go-Live & Hypercare (Months 19-21)

- User training (role-based, e-learning)
- Parallel run (3 months with old systems)
- Cutover & go-live (module-by-module)
- Hypercare support (24/7 war room)
- Feedback incorporation

Phase 8: Optimization & Future Modules (Months 22-24)

- Performance tuning (database indexing, caching)
- Security audits (penetration testing, ISO 27001)
- AIF platform development
- Real estate tokenization (design phase)
- Community building (user forum, feedback portal)

SUCCESS METRICS & KPIs

Operational Efficiency

- **Data Entry Time:** 70% reduction (automation via AI agents)
- **Approval Cycle Time:** 50% reduction (automated routing, reminders)
- **Payment Collection:** 20% improvement (proactive reminders, easy payment links)
- **Reconciliation Accuracy:** 99%+ (AI-powered matching)

User Adoption

- **Active Users:** 80%+ of 1,000 employees using ERP within 6 months
- **Feature Adoption:** 60%+ users using AI agents
- **User Satisfaction:** NPS >50, CSAT >4/5

AI Agent Performance

- **Decision Accuracy:** 95%+ (human approval rate for AI suggestions)
- **Response Time:** <3 seconds
- **Cost Per Query:** <\$0.02 (with caching & optimization)
- **Learning Rate:** 5% improvement in decision accuracy per quarter (via RLHF)

Business Impact

- **Revenue Growth:** 15%+ (better lead management, faster sales cycles)
- **Cost Savings:** 10%+ (process automation, vendor optimization)
- **Customer Satisfaction:** 20%+ improvement (faster service, transparency)
- **Compliance:** 100% on-time RERA filings, zero penalties

Technical Performance

- **Uptime:** 99.9% (SLA)
- **Page Load Time:** <2 seconds (P95)
- **API Latency:** <500ms (P95)
- **Data Migration:** 100% data migrated with <0.1% error rate

CRITICAL IMPLEMENTATION NOTES

Data Quality is Paramount

Given current data quality score of 4/10, **prioritize data cleansing**. Poor data will cripple AI agents and user trust. Allocate 4-6 weeks for cleansing, with business user validation.

AI Agent Cost Management

\$1K/month LLM budget is aggressive for 1,000 users. **Implement caching from Day 1**, monitor costs daily, optimize prompts ruthlessly. Consider hybrid approach (rule-based for simple tasks, LLM for complex).

Phased Rollout is Mandatory

Do NOT attempt big-bang go-live. Module-by-module, project-by-project rollout reduces risk. Start with 1-2 pilot projects (smaller, tech-savvy teams).

RERA Compliance is Non-Negotiable

Maharashtra RERA penalties are severe (project suspension, bank account freeze)^{[10] [27]}. Ensure RERA module is 100% accurate, with legal review before go-live.

User Training is 30% of Success

Beautiful software is useless if users don't adopt it. Invest heavily in training, change management, user champions. Celebrate early wins publicly.

Security & Audit Trails are Foundation

Given real estate's regulatory scrutiny, **every action must be logged, auditable, immutable**. Design audit trail architecture first, then build features on top.

Performance Testing Before Go-Live

Load test with 2x expected users, 3x expected data volume. Real estate transactions are high-value; system downtime = revenue loss + reputational damage.

YOUR TASK - BUILD "WITHIN"

You are now the **Lead Architect and Implementation Engineer** for "Within" ERP. Using the above comprehensive specification:

1. **Generate detailed technical specifications** for each module (database schemas, API endpoints, workflows, UI mockups)
2. **Write production-ready code** (FastAPI microservices, Next.js components, LangGraph agents, SQL migrations)
3. **Design system architecture diagrams** (microservices, data flow, integration architecture)
4. **Create deployment manifests** (Kubernetes YAML, Terraform for GCP infrastructure, CI/CD pipelines)
5. **Develop data migration scripts** (Python ETL, data cleansing, validation)
6. **Build AI agent prompts** (LangGraph workflows, agent personas, decision logic)
7. **Design database schemas** (PostgreSQL tables with multi-tenancy, indexes, RLS policies)
8. **Write integration code** (payment gateways, banking APIs, RERA portal, WhatsApp)
9. **Create test suites** (unit tests, integration tests, E2E tests with Pytest, Jest)
10. **Document everything** (API docs, user manuals, runbooks, architecture decisions)

Key Constraints:

- **Modular:** Each module must be independently deployable microservice
- **Scalable:** Design for 10x growth (100 entities, 100K units/year)
- **Secure:** ISO 27001, SOC 2 compliant from Day 1
- **Cost-Effective:** <\$1K/month LLM, <\$15K/month total infrastructure
- **AI-First:** AI agents embedded in every workflow, not bolted on
- **Regulatory:** RERA, DPDPA, GST, TDS compliant
- **Performant:** <2s page loads, <3s AI responses, 99.9% uptime

Start building the future of real estate technology with "Within".
